The AdS/CFT correspondence and its ramifications intend to answer questions ranging from quantum gravity to condensed matter and nuclear physics. A large community of Latin American physicists, including researchers from different areas of theoretical physics, mathematics and quantum information, participates in this endeavour and many of them have made important contributions in the field. This workshop aims to bring together the Latin American and international community to promote scientific collaboration, and to contribute in the training of young researchers. There is no registration fee.
