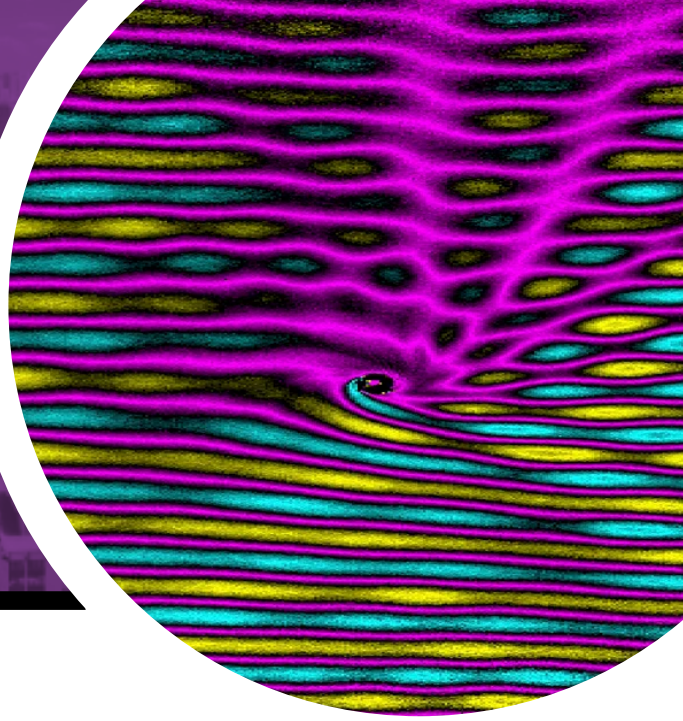
ICTP SAIFR | International Centre for Theoretical Physics South American Institute for Fundamental Research

CHALLENGES FOR WITNESSING QUANTUM ASPECTS OF GRAVITY IN A LAB



June 7-11, 2021

by videoconference

SPEAKERS

Nancy Aggarwal (Northwestern University, USA)
Markus Arndt (University of Vienna, Austria)
Markus Aspelmeyer (University of Vienna, Austria)
Peter Barker (University College London, UK)
Chas Blakemore (Stanford University, USA)
Daniel Carney (Lawrence Berkley lab, USA)
N.D. Hari Dass (I. of Mathematical Sciences – Chennai, India)
Brian D' Urso (Montana University, USA)
Ron Folman (Ben Gurion University, Israel)
Gerald Gabriele (Northwestern University, USA)
Jan Harms (Gran Sasso Institute, Italy)
Jack Harris (Yale University, USA)
Myungshik Kim (Imperial College, UK)
Timothy Kovachy (Northwestern University, USA)
Claus Laemmerzahl (University of Bremen, Germany)
Tong Chang Li (Purdue University, USA)
Yair Margalit (MIT, USA)
Ryan Marshman (University College London, UK)
Samir Mathur (Ohio State University, USA)
Anupam Mazumdar (U. of Groningen, The Netherlands)
David Moore (Yale University, USA)
Gavin Morley (Warwick University, UK)
Cristian Panda (Berkley, USA)
Maulik Parikh (Arizona State University, USA)
Igor Pikovski (Stockholm University, Sweden)
Martin Plenio (University of Ulm, Germany)
Simone Rijavec (University of Oxford)
Carlo Rovelli (Aix-Marseille University, France)
Jacob Taylor (NIST-Baltimore, USA)
Marko Toros (University of Glasgow, UK)
Hendrik Ulbricht (University of Southampton, UK)
Vlatko Vedral (Oxford University, UK)
Katheryn Zurek (Caltech, USA)

Understanding gravity in the framework of quantum mechanics is one of the significant challenges in modern physics. Along this line, a primary question is whether gravity is a quantum entity subject to quantum mechanical rules. Despite the purported weakness of gravity, the phase evolution induced by the gravitational interaction of two-micron size test masses in adjacent matter-wave interferometers can detectably entangle them via the exchange of graviton mediation even when they are placed far enough apart to keep Casimir-Polder forces at bay. This prescription for witnessing entanglement certifies gravity as a coherent quantum mediator through simple correlation measurements between two spins: one embedded in each test mass known as a QGEM (quantum gravity induced entanglement of masses) protocol. This workshop will discuss various theoretical and experimental challenges to conceive the QGEM protocol in a lab that will require an unprecedented level of accuracy in witnessing the quantum nature of one of nature's weakest interactions.

There is no registration fee.

Registration deadline:
May 30, 2021

FAPESP ICTP unesp IFT - UNESP

ORGANIZERS
Sougato Bose (U. College London, UK)
Andrew Geraci (Northwestern U., USA)
Anupam Mazumdar (U. of Groningen, The Netherlands)

ICTP-SAIFR STEERING COMMITTEE
Carlos Brito Cruz - FAPESP scientific director
Atish Dabholkar - ICTP director
Luiz Davidovich - Brazil Acad. Science president
Peter Goddard - Search Committee chair
Juan Maldacena - Representing South America
Francisco Quevedo - ICTP former director
Sandro Valentini - UNESP rector

ICTP-SAIFR SCIENTIFIC COUNCIL
Michael Green (chair) - U. of Cambridge
Rosario Fazio - ICTP representative
Marcelo Yamashita - IFT-UNESP director
Marcel Clerc - U. de Chile
André de Gouvêa - Northwestern U.
Eduardo Fradkin - U. Illinois
Gabriela Gonzalez - LIGO, Louisiana State U.
Belita Koiller - UFRJ, Rio de Janeiro
Luis Lehner - Perimeter I., Waterloo
Gabriel Mindlin - U. de Buenos Aires

ICTP-SAIFR STAFF
Nathan Berkovits - Director
Rogerio Rosenfeld - Vice-Director
Pedro Vieira - Perimeter-SAIFR Coordinator
Jandira Oliveira - Executive Manager
Humberto Neto - Executive Secretary
Lilia Faria - Financial Manager
Malena Stariolo - Science Journalist
Artur Alegre - Science Journalist
Isabela Pereira - Technical Assistant
