Brazilian Effort on Liquid Argon Detectors for Neutrino Physics

This white paper describes the main activities and projects of the Brazilian groups in the neutrino program based at Fermilab.

The main efforts are:

- *Deep Underground Neutrino Experiment (DUNE).*
- *Short Baseline Neutrino Program (SBN).*

DUNE

- Instrumentation (DUNE and protoDUNE) – Photon Detection FD1 and FD2
 - Production and assembly of X-ARAPUCA for protoDUNE HD
 - Filters evaporation protoDUNE HD and VD
- Computing
- **New proposal for FD3**
- Tests
 - LAr tests
- Material characterization
 - Tests on adhesion of PTP on the dichroic filters
- LAr purification
 - **Inovative material for LAr purification – PULArC setup**
- Software
 - LArSoft analyses
 - Simulations
- Phenomenology

DUNE physics program

Origin of matter. Investigate leptonic CP violation.

Precision oscillation physics and test of 3-flavor oscillation

Neutrino mass hierarchy

Neutron star and black hole formation. Ability to observe neutrinos from supernova events and perhaps watch formation of black holes in real time.

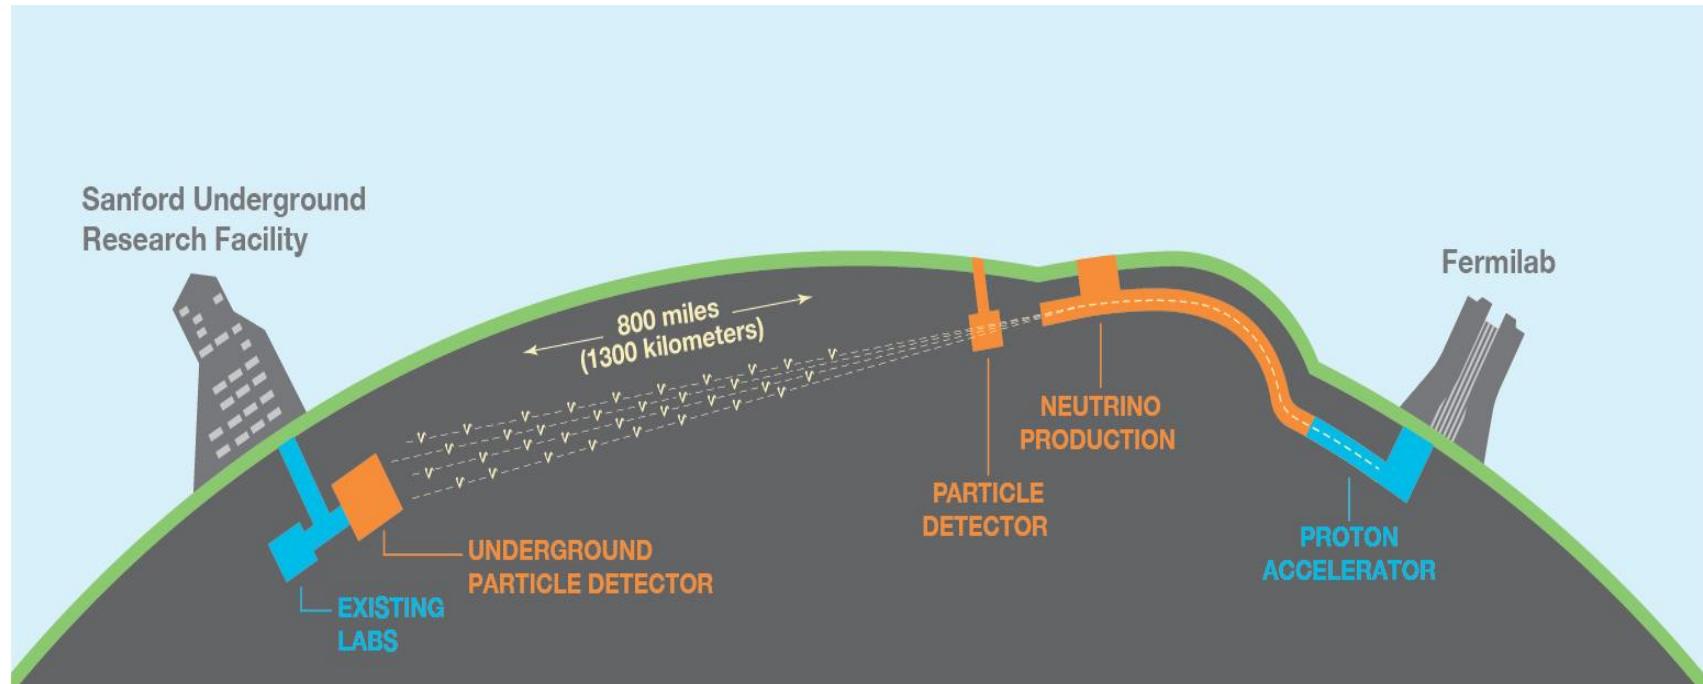

Unification of forces. Investigate proton decay, non standard interactions

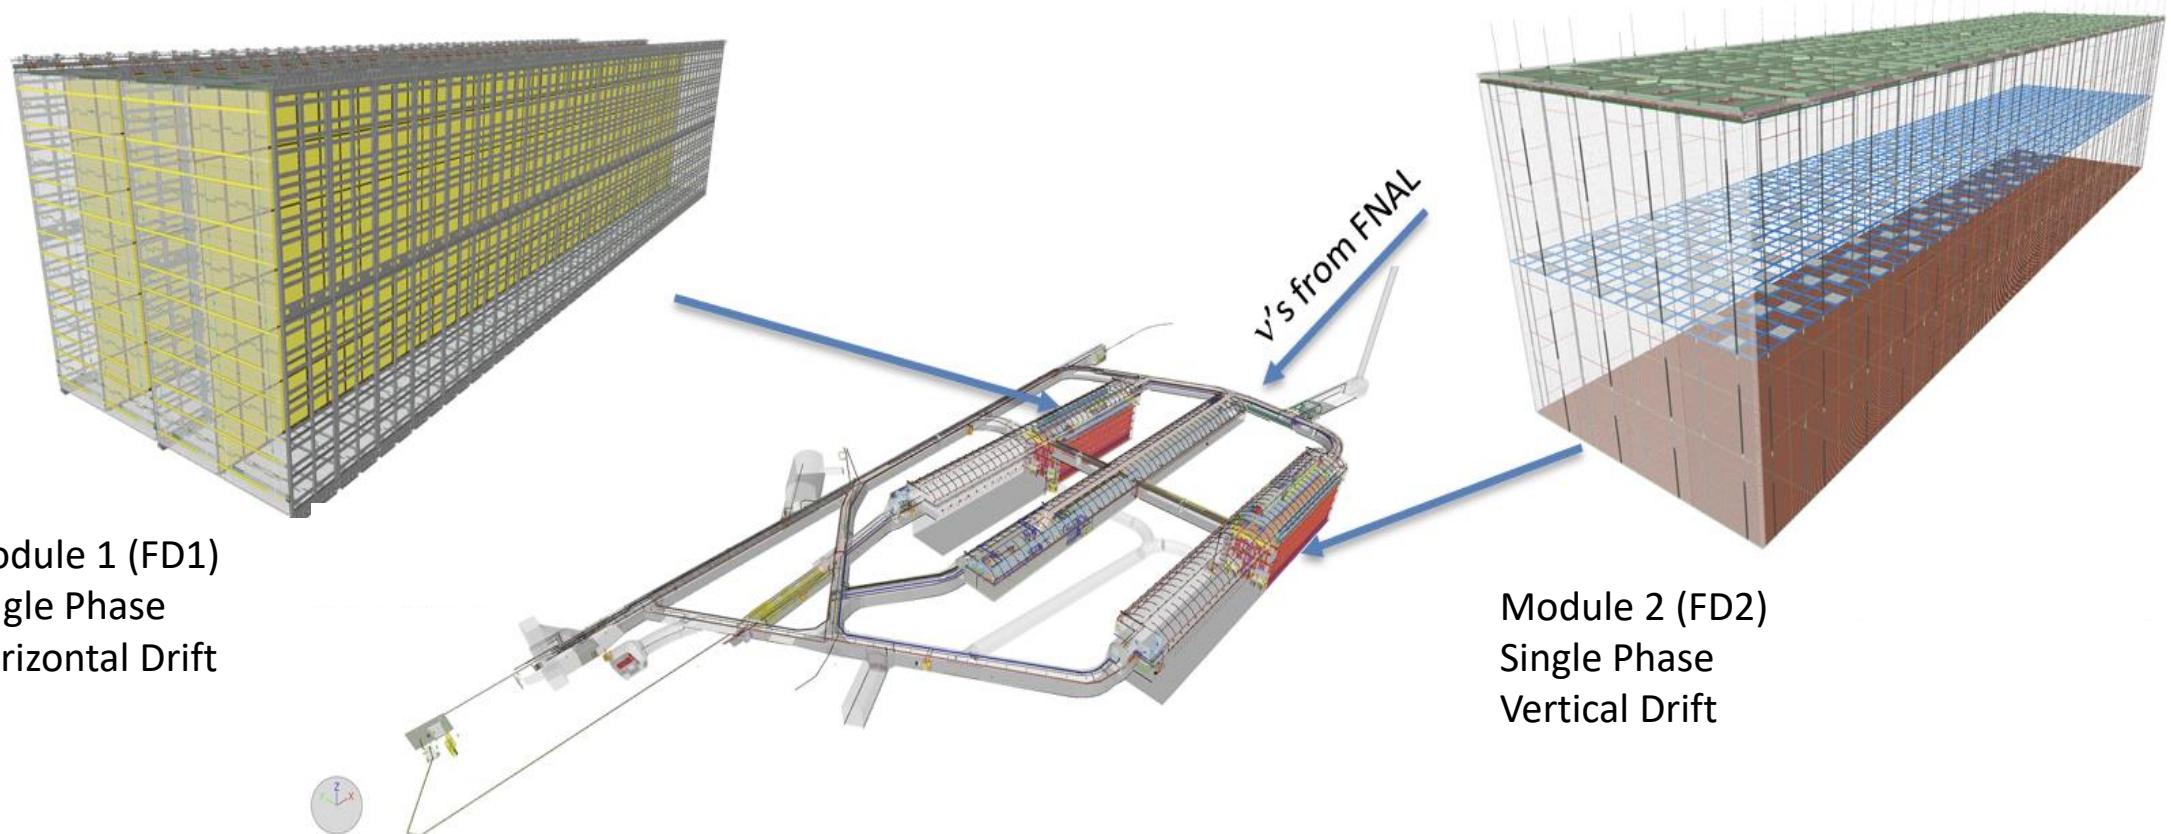

Atmospheric and Solar neutrinos.

Deep Underground Neutrino Experiment

DUNE

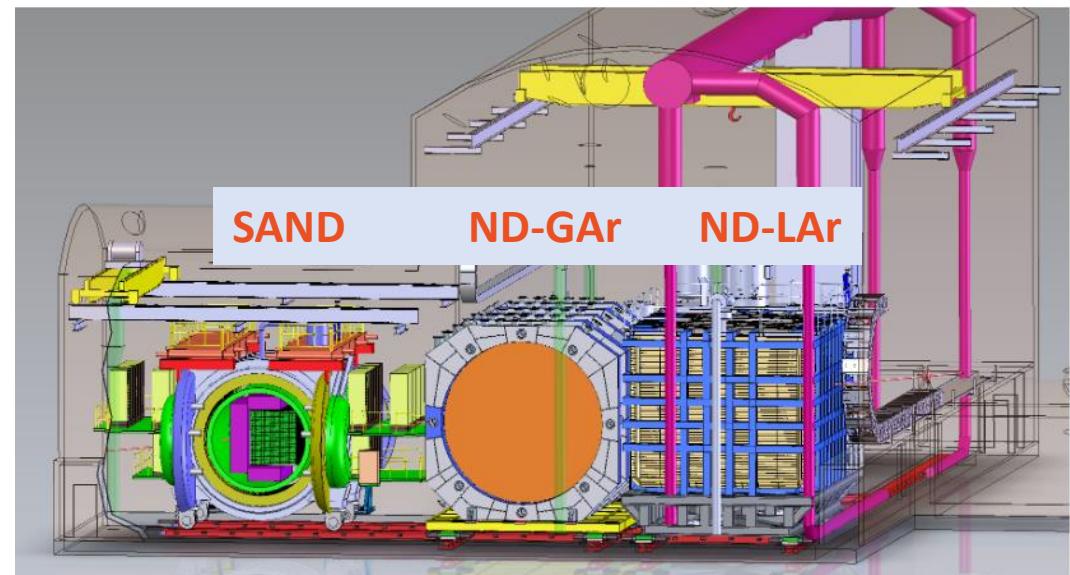

DUNE Phase I - Far Detector

APA: Anode Plane Assemblies

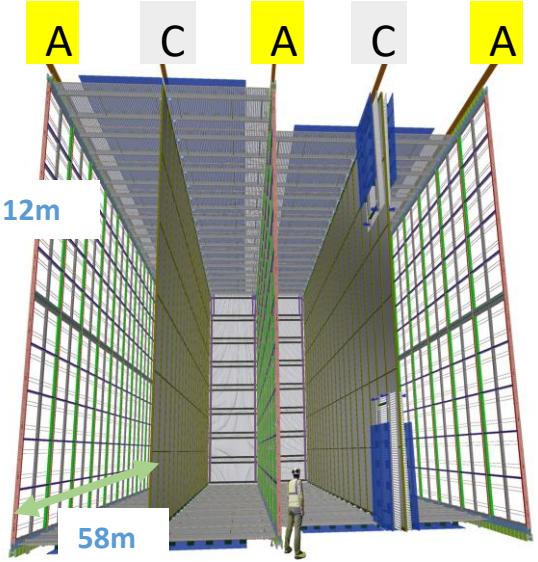

DUNE Phase II

- Beam power upgrade to 2.4MW
- Far Detector with 4 modules (**FD3 and FD4**)
- Near Detector : TMS replaced by ND-GAr
 - ND-LAr
 - ND-GAr → important for higher precision ν -Ar measurements and when the **statistics reach ~200 kt-MW-yrs**
 - SAND

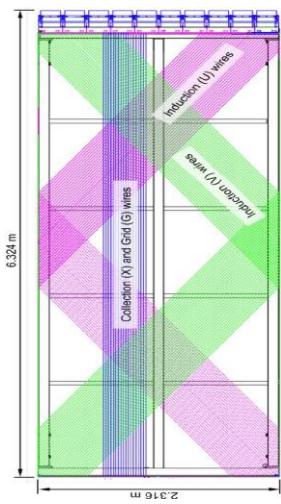

DUNE Far Detector (FD1 & FD2)

Horizontal Drift

- 4 drift volumes - 3.6 m drift
- Electric field = 500 V/cm
HV = -180 kV
- High-resistivity CPA for fast discharge prevention
- Anode: 150 APAs, each with 4 wire planes (Grid, 2 x Induction, Collection)
- Photon Detectors: **X-ARAPUCA**
10 modules / APA
- Total of **1500 modules**

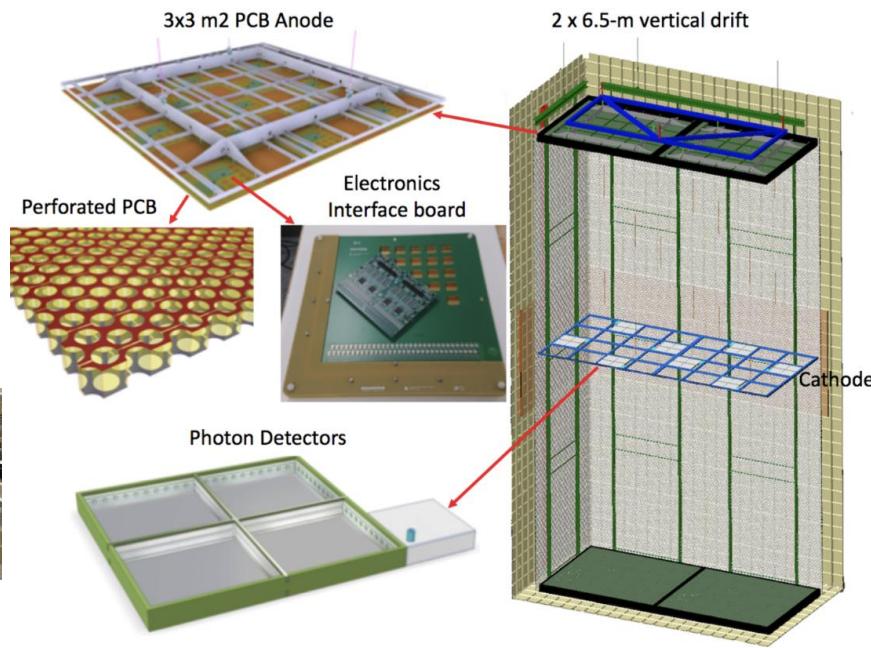

X-ARAPUCA module (212cm x 12cm)

Vertical Drift

- 2 drift volumes ($13.5\text{ m} \times 6.5\text{ m} \times 60\text{ m}$) → 6.5m drift
- 2 Anode planes (top & bottom)
- Charge Readout Planes (CRP) → **perforated PCB**, fully immersed in LAr
- Cathode in the center at ~300kV

PD: Large size X-ARAPUCA tile ($0.6 \times 0.6 \text{ m}^2$)

Photon detection system – HD

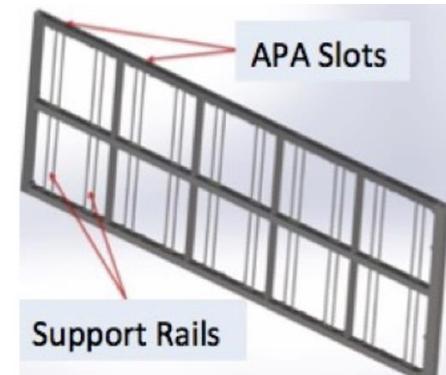

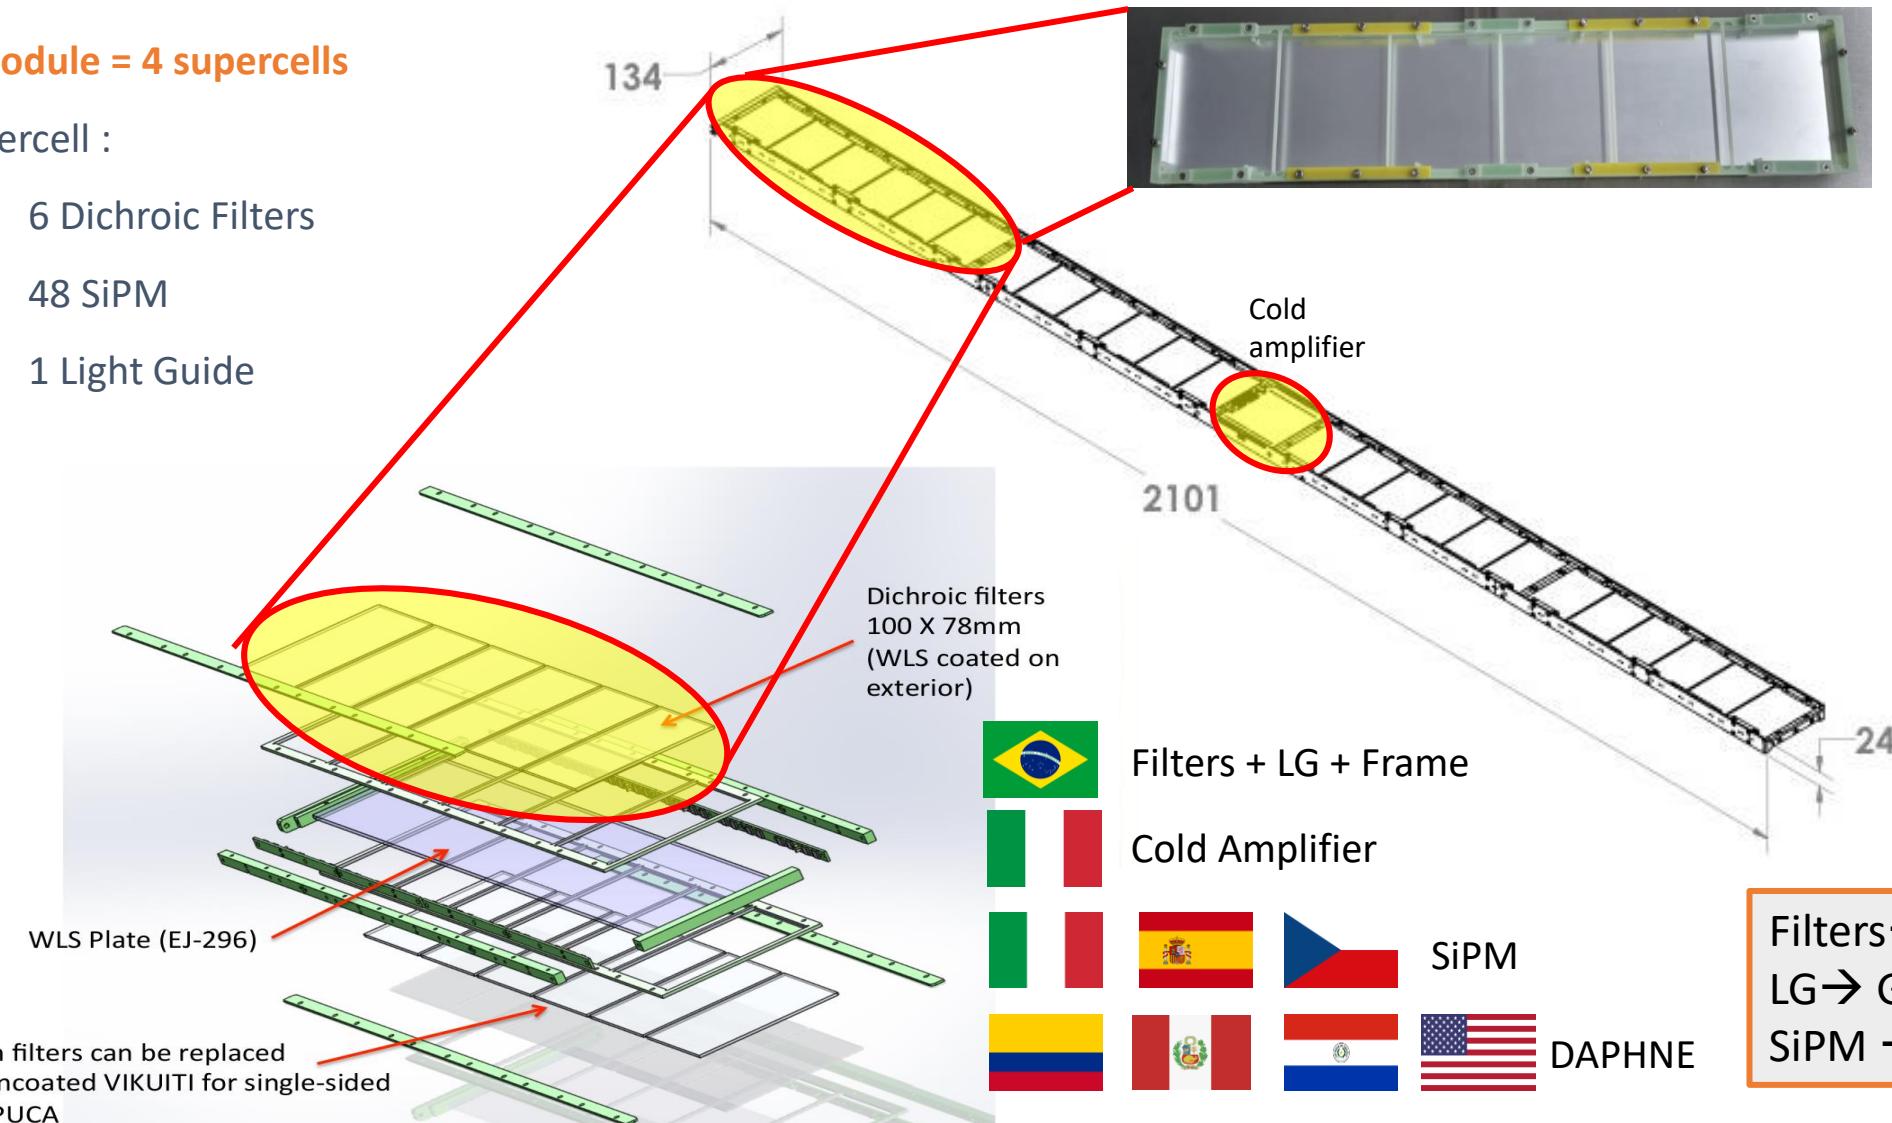

1 Module = 4 supercells

Supercell :

6 Dichroic Filters

48 SiPM

1 Light Guide

10 modules per APA

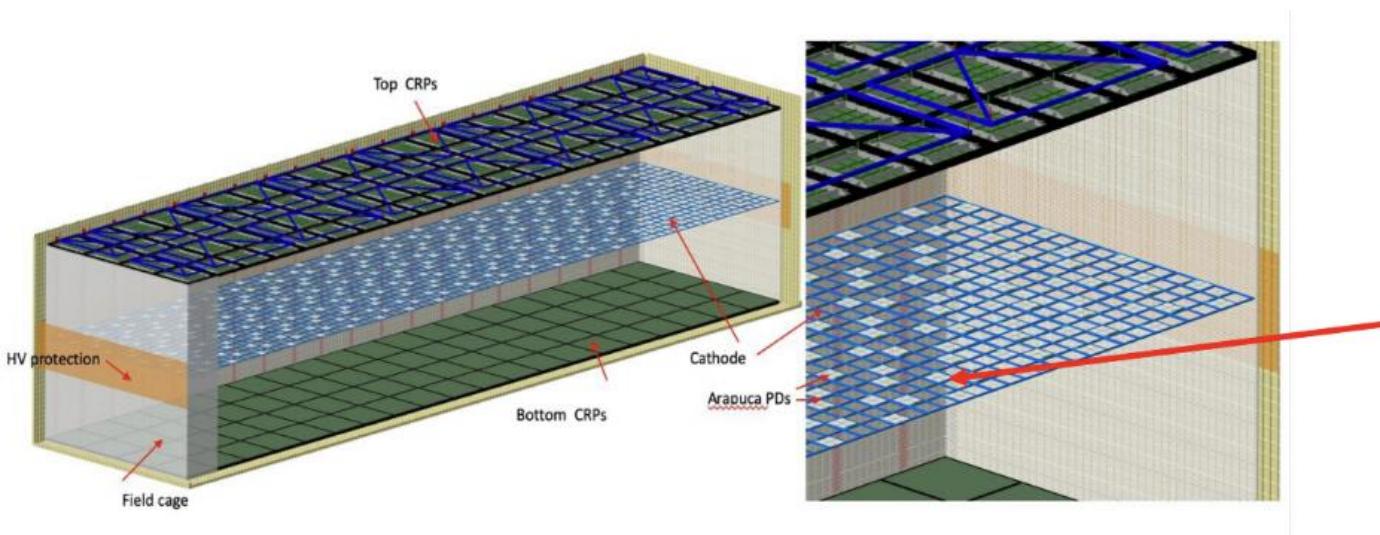

1500 in total

500 double sided

1000 single sided

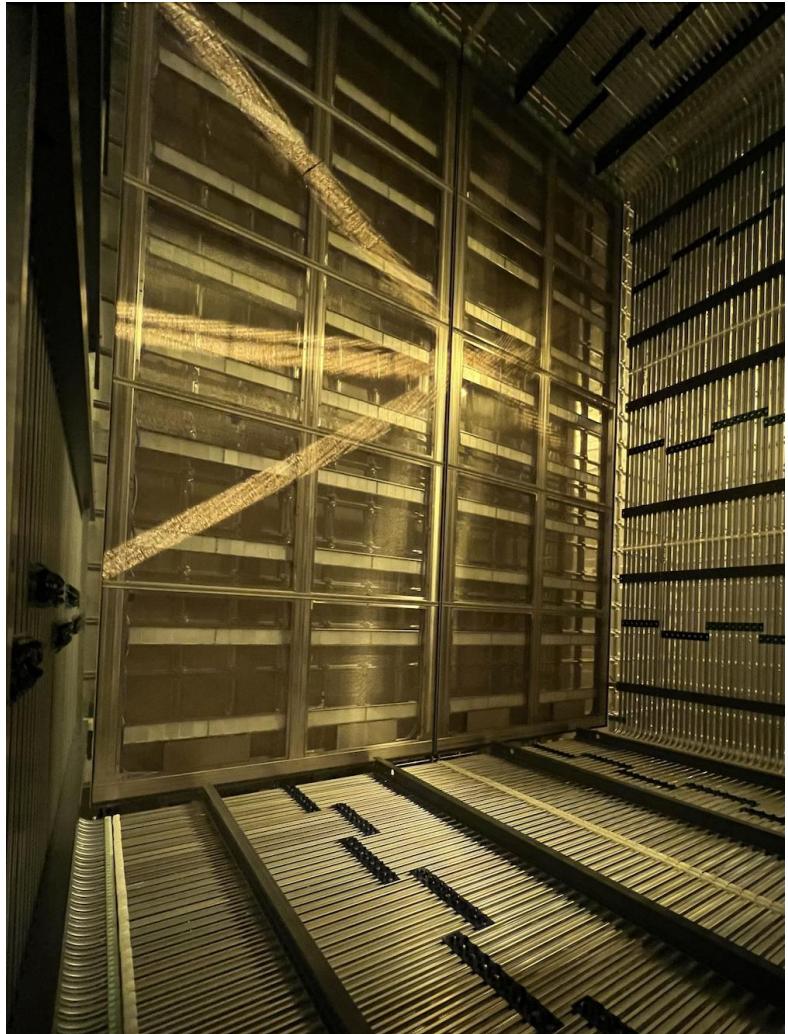

Photon detection system – VD

- The Vertical Drift does not have the mechanical constrains of the Horizontal Drift for the X-ARAPUCA modules.
- They have been re-designed with a square shape ($60 \times 60 \text{ cm}^2$) in order to maximize the **Light Collection**
- The basic Megacell module - single sided - has 36 dichroic filters with $97 \times 97 \text{ mm}^2$

Megacell: new version of the photon detection system

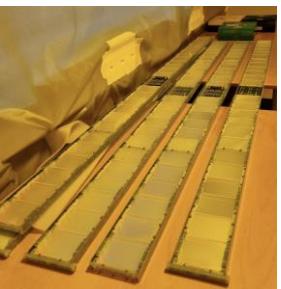

ProtoDUNE – HD & VD

We are preparing the run of **protoDUNE** to test the final components of Horizontal Drift and Vertical Drift far detector

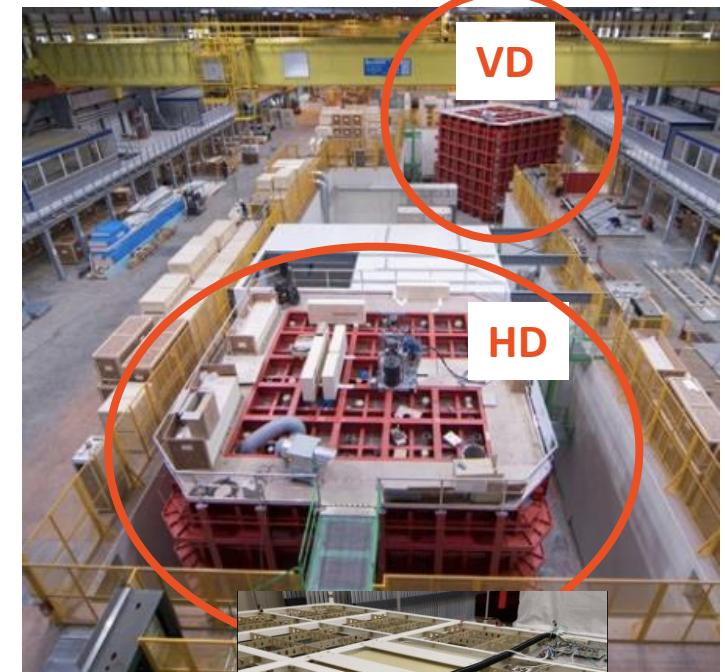

Horizontal Drift

- DUNE APA 2 top and 2 bottom
- Photon Detection few different options are being evaluated
 - Two different SiPM type (**Hamamatsu and FBK**)
 - Two different light guide (**ELJEN and GlastoPower**)
- Test of the electronics readout (**DAPHNE**)

Dichroic Filter dimensions

Size mm x mm	glass/batch #
97 x 97	25
202 x 97.5	14
150 x 150	12

Vertical Drift

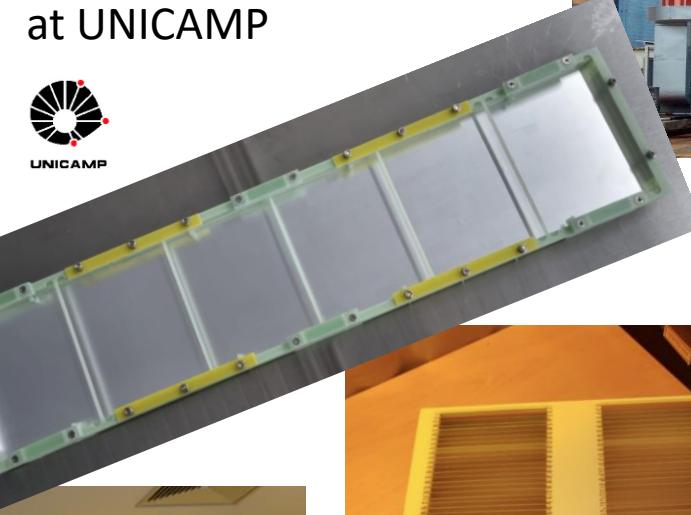

PDS

- New X-ARAPUCA modules
- 8 on the cathode (Power of Fiber)**
- 8 on the membrane**

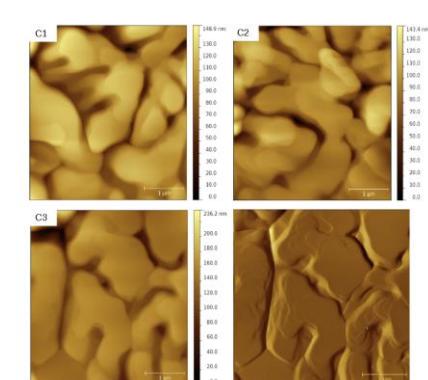

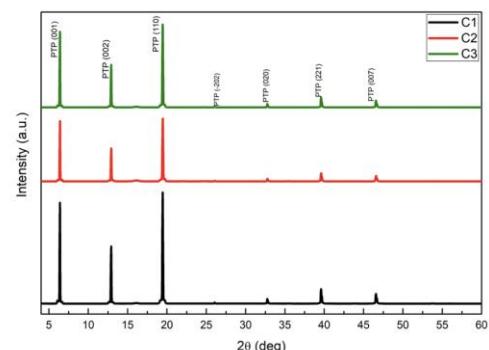

ProtoDUNE HD
200 supercells produced in
Brazil and pre-assembled
at UNICAMP

1400 Short pass dichroic filters
Produced by OPTO company
(Brazil) – ProtoDUNE HD and VD

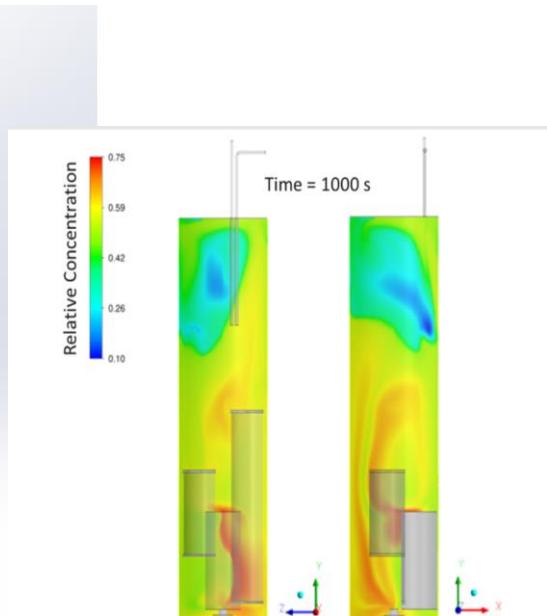

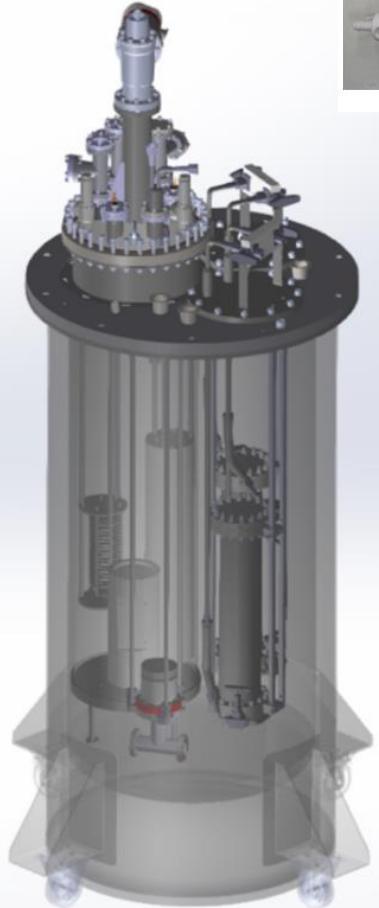

ADHERENCE of PTP
on dichroic filters

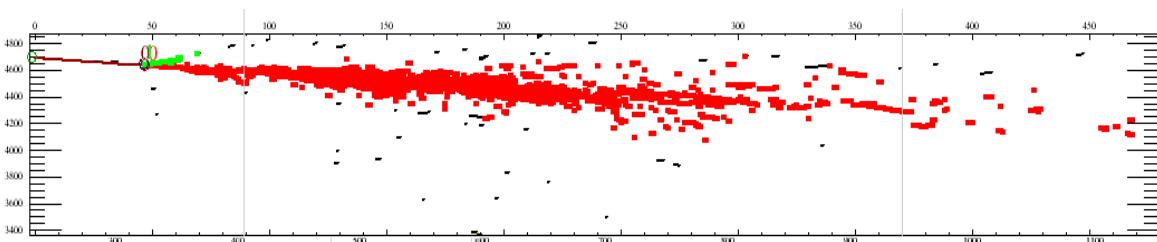

PULArC – Purification LAr Cryostat

Media Activation Cu-0226S – BASF (reference)

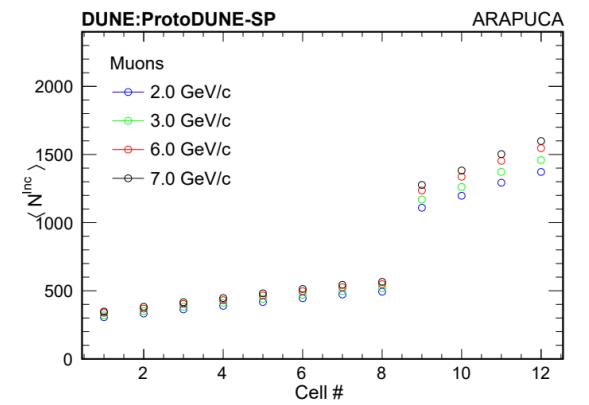

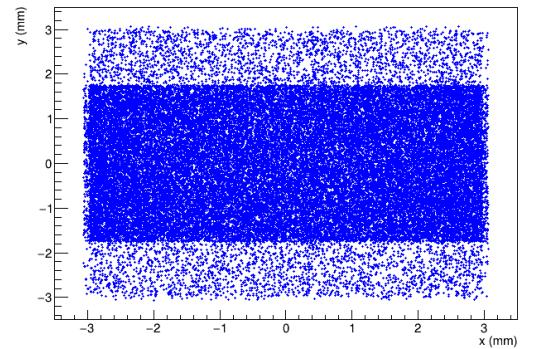

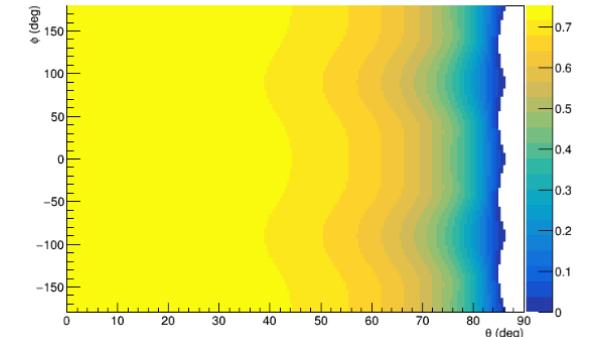

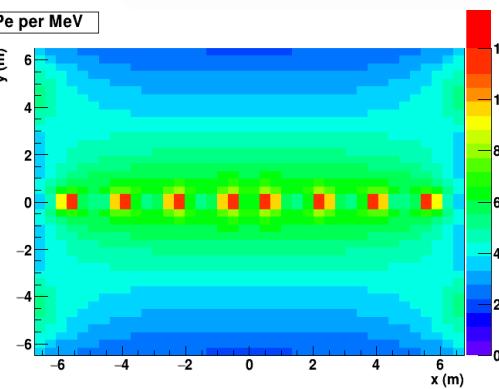

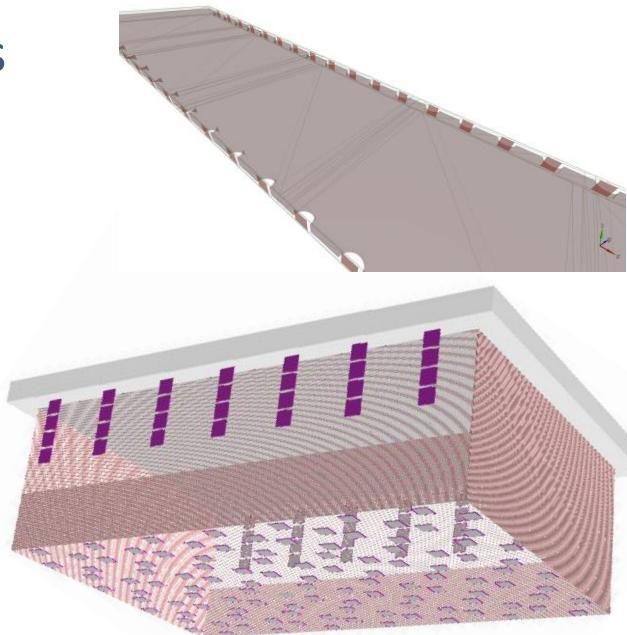

Software - PDS

- Simulation and data analysis of light detectors
- Modeling production and propagation of scintillation light in LAr
- Simulation and data analysis of (Proto)DUNE detectors and PDS
- Computational structure for light simulation (performance and data analysis)

UFABC – ITA – UTFPR - UNIFESP

SBND

Main contributions

- Production, assembly, installation and tests of X-ARAPUCA system
- Evaporation of the dichroic filters
- Developments on the APSAIA readout electronics
- Developments on the ARARA readout electronics
- Simulations
- DAQ

X-ARAPUCA

PD-Box

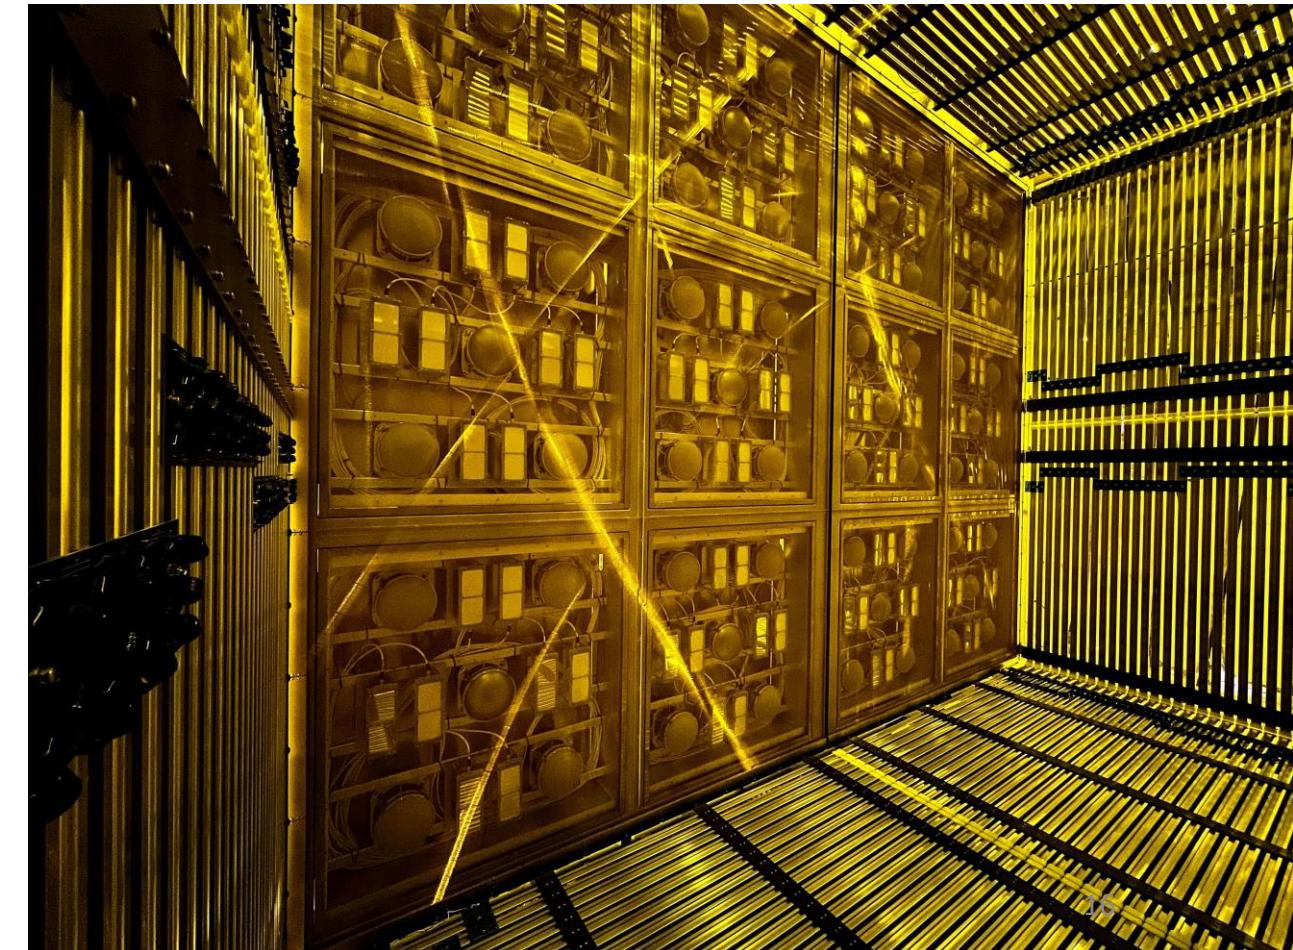

TPC

PD-Box
